

GIOVANNA BARACCA

MD, Specialized in Audiology and Phoniatrics

PROFILO

Since my graduation, I focused my interest on voice and hearing disorders. Because of my strong passion for music and theater it was natural to dedicate myself to the care of artists. My current activity divides between clinical consultations, scientific research and teaching in professional theatre academies and conservatories around Italy.

The most important project I am working on now is the creation of a suggestive place in the Tuscan countryside, whose charm is well known worldwide, especially suitable for scientific meeting, masterclasses and advanced courses focused on the artistic voice.
