Interests and Professional Practice

After studying medicine at Ege University Faculty of Medicine, and otolaryngology head and neck surgery in Dokuz Eylul University Faculty of Medicine Otolaryngology department; Dr. Denizoglu decided to pursue a career in phoniatics. Starting with basic physics, he studied vocal pedagogy between 2001 and 2003 in the conservatory of music. His ongoing studies for Biophysics (PhD candidate) and Audiology Voice and Speech Disorders (MSc) are part of his enthusiasm about completing the whole picture of human voice in the name of basic, clinical and pedagogical vocology fields.

He is an amateur singer and interested in vocal music in various approaches (Singing pedagogy, musical acoustics). He has prepared the curriculum for Pedagogical Vocology lesson and has been delivering the lectures in three universities' singing schools since 2008. He has devised new projects and devices for voice therapy and training of professional voice users such as Laryngoaltimeter, Vocal posturometer and NIPA (Negative Inertance Phonation Apparatus).

His medical work is exclusively on phonosurgery and voice therapy. He has been studying on developing new devices (Laryngoaltimeter, Vocal Posturometer, doctorVOX, pocketVOX, maskVOX) for voice therapy and vocal training and tools for phonosurgery as well. Based on Sihvo's LaxVox Exercise; he has structured the DoctorVox Voice Therapy and Vocal Training Program. His book 'Textbook of Clinical Vocology' has been published in January 2020.
